Jason’s Story: Minutes Matter in a Heart Attack

When Jason Miller of Dover experienced a heart attack in June, quick coordination and care from Dover Fire and Rescue and Wentworth-Douglass Hospital helped save his life.

Jason Miller of Dover had a heart attack in June. In his 40s, Miller is active, not overweight, has no family history of cardiac problems and no issues with cholesterol or high blood pressure. "This could have happened to anyone," says Miller: "I work as a carpenter, and I had spent the day laying down a floor. At first, I thought I had pulled a muscle, but then I started feeling discomfort on both sides of my chest. So I left work early and drove north to Dover. By the time I made it through the Spaulding Turnpike toll booth, both of my arms were numb, and I had cold sweats and terrible nausea."

Miller pulled his car over, called his wife, and dialed 911. Dover Fire and Rescue arrived at the scene and immediately began transmitting vital information to the Wentworth-Douglass Hospital Emergency Department, which activated a STEMI team. STEMI (ST-Elevation Myocardial Infarction) is a true medical emergency. The most common symptoms are shortness of breath, nausea, and chest pain, which may travel from the chest into the shoulder, arm, neck or jaw, and last for more than a few minutes. One of the arteries that supplies oxygen and nutrient-rich blood to the heart muscle is blocked.

Follow us!

1. A 24/7 Cardiac Catheterization Lab and expert team always ready to care for patients experiencing a heart attack.
2. Advance certification as a Primary Stroke Center means we use the latest practices and diagnostic criteria to ensure you get the stroke treatment you need.
3. Level III Adult and Pediatric Trauma Center means we’ve proven ourselves capable of providing prompt assessment, resuscitation, surgery, intensive care, and stabilization of patients, for both children and adults.
4. All our physicians are board certified in emergency medicine, and our advanced practice clinicians and nurses have advanced emergency training.
5. Dedicated Child Life Specialists in the Emergency Room help minimize a child’s fear and stress during their care.
6. We have a direct link to Massachusetts General Hospital resources and expertise.
7. At a hospital emergency room, you get fast access to lifesaving care the moment you need it.
8. Two walk-in Express Care centers in Dover & Lee offer a more affordable option for non-life-threatening emergencies.
9. Proudly serving the Dover community for over 110 years.
10. Winner of the 2019 Best of Seacoast Award for Best Emergency Room. Wentworth-Douglass also won Best Hospital, Best Urgent Care for Express Care, and Best Place to Have a Baby.

TOP REASONS NOT TO CHOOSE A FREE-STANDING EMERGENCY ROOM

1. Not all services are onsite, potentially delaying life-saving care. Free-standing emergency rooms are not attached to a hospital, so if advanced treatment is required for a heart attack, stroke, or surgical needs, specialists are not onsite, and patients will be transferred to an acute care hospital.
2. Minor conditions will cost you more. Seeking non-emergent care at freestanding emergency rooms will cost you more than if provided at an urgent care center, or walk-in care facility.
3. It’s confusing! Free-standing Emergency Rooms look like urgent care centers but aren’t. They offer emergency level care, but without the advanced care that is available at an acute care hospital. If you visit a free-standing ER and need to be admitted for further care, you might also be admitted to a different hospital than you intended. Each of these scenarios can cause confusion for you and your family.

Know where to go. Visit wdhospital.org/ER
A $200,000 grant from the New Hampshire Charitable Foundation will fund innovative and compassionate care for pregnant and newly parenting women and their babies affected by substance use disorders.

A Brighter Future for Moms and Babies

The opioid epidemic continues to devastate and overwhelm communities. Approximately 60 moms with substance use disorders deliver at Wentworth-Douglass Hospital each year. Wentworth-Douglass Hospital is the region’s highest volume birth center with over 1,200 births each year.

The traditional score-based protocol to treat substance-exposed infants dates back to 1970. Babies were treated with morphine and then weaned over a hospital stay that typically lasted over three weeks, often separating moms and babies.

“We now know better how to help,” says White. Today’s “best practices” include a new researched-based protocol for caring for newborns born exposed to substances called “Eat, Sleep, Console.” This functional-based tool has resulted in decreased length of stay for infants, decreased use of morphine, and increased parental time interacting and bonding with their babies.

“Long-term success is improved when moms have the functional and emotional support they need for recovery,” says Wyma, “and it is often non-medical barriers — transportation, shelter, clothing and food — that impact a mom’s ability to maintain recovery. While we can help identify these services, if a mom has no transportation to get to treatment, it can jeopardize months of hard work and sobriety.”

Because the need is so clear, Wentworth-Douglass has implemented new programs to assess and identify resources to improve parenting outcomes, develop a Plan of Safe Care upon discharge, and interface with local agencies. Part of the patient’s care plan often includes referrals to community resources such as Early Head Start, SOS Recovery parenting groups, The Doorway and the VNA.

“By working together,” says White, “we can change outcomes for pregnant and newly parenting women and their babies affected by substance use disorders. We can treat them as all patients deserve to be treated — with compassion, encouragement, and concrete tools for success.”

Treatment for Mental Health, Substance Use Disorders Identified as Community Health Needs in Wentworth-Douglass Hospital’s 2019 Needs Assessment

Wentworth-Douglass is dedicated to improving the health of the communities we care for. Every three years, Wentworth-Douglass works closely with community representatives to conduct a Community Health Needs Assessment to identify how Wentworth-Douglass should focus programs and services to improve the overall health of the individuals and families we serve.

The 2019 Community Health Needs Assessment identified nine community health needs with mental health and substance use disorders and access to treatment for these services identified as the most critical health issues. To address these needs, Wentworth-Douglass plans to expand mental health services and substance use disorder screening, counseling, referral, treatment, and prevention services.

“There is a strong correlation between mental health and substance use disorders. It is important to screen for and treat both since one affects the other. By increasing access to mental health and substance use disorder services and working together with the community to reduce stigma, we are committed to helping improve access to these important services,” says Kellie Mueller, MEd, Assistant Vice President of Behavioral Health at Wentworth-Douglass Hospital.

Wentworth-Douglass is grateful to our patients and the community. Thank you for allowing us to be part of your lives and for choosing us for your health care needs.

The 2019 Wentworth-Douglass Hospital’s Community Health Needs Assessment is available online at wdhospital.org. For more information, contact the Community Relations Department at Wentworth-Douglass Hospital at (603) 740-2818.
You Can Prevent Type 2 – Free Program

One out of three American adults has prediabetes, which amounts to 84 million people. Of this number, nine out of ten don’t even know they have prediabetes, meaning a significant portion of our national population is unaware that they are at higher risk of heart attack, stroke, and type 2 diabetes.

Prediabetes means that your blood sugar is higher than normal but not high enough to be diagnosed with type 2 diabetes. Risk factors for prediabetes include being overweight, having a family history of diabetes, living a sedentary or not active lifestyle, having diabetes while you were pregnant (gestational diabetes), and being over age 45. Without action, people with prediabetes are at risk of developing type 2 diabetes within five years. The good news: prediabetes can often be reversed.

Beginning in January, the Patient and Family Learning Center at Wentworth-Douglass Hospital is offering a lifestyle change program to help people with prediabetes. The program, Prevent Type 2, was developed as part of the National Diabetes Prevention effort and is backed by the Centers for Disease Control and Prevention – and it’s scientifically proven to work.

Prevent Type 2 offers weekly small group meetings with a trained lifestyle coach. Together, the group discusses and supports goals to eat healthier, move more, reduce stress, and improve sleep. The second half of the program is designed to help individuals maintain the healthy changes they have learned and turn them into healthy habits. Research has shown that these lifestyle changes can reduce a person’s risk of developing type 2 diabetes by half.

MAKE 2020 YOUR YEAR TO IMPROVE!
Prevent Type 2 is a free community program. The Patient and Family Learning Center will be hosting two information sessions to share how you can cut your risk of type 2 diabetes by at least half.

INFO SESSIONS:
Thursday, January 9, 2020
OR Thursday, January 23, 2020
TIME: 5:30 – 6:30 pm
LOCATION: Wentworth-Douglass Hospital, Garrison Auditoriums
RSVP at wdhospital.org/events or call (603) 609-6027.

ARE YOU AT RISK?
Learn more about prediabetes and take the risk test at preventdiabetesnh.org

STROKE is an EMERGENCY – CALL 9-1-1

Wentworth-Douglass was the first hospital in New Hampshire to earn Primary Stroke Center Advanced Certification by The Joint Commission, the nation’s leading healthcare accrediting agency. As a Primary Stroke Center, Wentworth-Douglass provides the best practices in acute stroke care to achieve better outcomes for patients. We have also earned the Get With The Guidelines–Stroke Gold Plus Quality Achievement Award from the American Stroke Association, demonstrating our commitment for providing aggressive, proven stroke care.

Through our affiliation with Massachusetts General Hospital, we have full access to their expert clinicians through real-time telemedicine videoconferencing to assist with diagnosis and treatment options.

Learn more at wdhospital.org/stroke.
Dr. Webster earned her Doctor of Medicine degree from the University of Massachusetts Medical School in Worcester, Mass. A member of the American College of Cardiology and the American Heart Association, her personal interests include choir, travel, and humanitarian work. Dr. Webster has traveled to Anguilla to provide medical care for the underserved and coordinated a fundraiser to support Hurricane Irma relief efforts. Dr. Webster will see patients at Wentworth-Douglass Health Partners-Cardiologic Group in Dover (19 Old Rollinsford Road, Building B).

To make an appointment with Dr. Webster, call Wentworth Health Partners-Cardiologic Group at (603) 516-4265.
At her heaviest, Michelle Duarte of Rochester weighed 293 pounds and had type 2 diabetes. Faced with growing health problems, more and more prescription medications, and dwindling confidence, Michelle was ready to make a change.

“I knew there was something out there, I just needed to do more research and find out what,” she recalls. Then she found the Wentworth-Douglass Center for Weight Management and Bariatric Surgery, and her journey began.

“When I met Dr. Dmytro Havaleshko and he looked me in my face and told me that he could make my diabetes go away, I trusted him and I followed through with it and here I am a year later diabetes free,” says Michelle.

Since her sleeve gastrectomy surgery, Michelle has also lost more than 100 pounds and gained a new life. But the surgery itself was just one step in her ongoing journey and Dr. Havaleshko just one member of her team.

“Our dedicated multidisciplinary team delivers the most advanced and comprehensive care for patients, including pre-surgery evaluation, nutrition education, and behavioral management training,” says Dr. Havaleshko. “After surgery, patients are provided with unlimited and ongoing guidance and support.”

“The support system I have had for the past year has helped me do so many things and go above and beyond my expectations,” says Michelle. “When I was at my heaviest, I never thought I’d ever do any of the things I do today,” she says. “Weight loss surgery gave me new life.”

Every day, we help our patients pursue a healthier, happier lifestyle with personalized weight management and surgery plans. Because our weight loss surgery program is accredited by the American Society for Metabolic and Bariatric Surgery, you can feel confident knowing it meets the highest national standards for quality and safety.

Surgeons Dr. Dmytro Havaleshko, Dr. Molly Buzdon and Dr. Cynthia Paciulli offer the only fully-robotic Bariatric Surgery program in New Hampshire and Maine.

“Traditional vegetable holiday side dishes are often loaded with added sugar or fat. This Brussels sprouts recipe uses balsamic vinegar, cranberries, and nuts to naturally flavor the vegetables. Roasting brings out the natural sweetness of the Brussels sprouts, making them less bitter tasting. Brussels sprouts are high in fiber, vitamin A, vitamin C, and vitamin K.”

Emily Thompson, RD, Bariatric Dietitian, Wentworth-Douglass Center for Weight Management and Bariatric Surgery.

INGREDIENTS:
- 1 1/2 lbs. Brussels sprouts
- 2 Tbsp. extra-virgin olive oil
- 1/3 cup pecans, roughly chopped
- 1/3 cup grated parmesan cheese
- 1/2 cup dried cranberries
- 1 Tbsp. balsamic vinegar
- Salt & pepper to taste

DIRECTIONS:
1. Preheat oven to 425°F. Spray a large, rimmed baking sheet with oil.
2. To prepare your Brussels sprouts, trim the nubby ends and any discolored leaves off the Brussels sprouts, then cut the sprouts in halves lengthwise.
3. On your prepared baking sheet, combine the halved sprouts, olive oil and salt. Toss until the sprouts are lightly and evenly coated. Arrange the sprouts in an even layer with their flat sides facing down.
4. Roast the sprouts until they are tender and golden on the edges, tossing halfway, about 20 to 25 minutes. When they’re nearly done (about 5 to 10 minutes to go), add the pecans to the pan and return them to the oven (this is an easy way to toast the pecans).
5. Meanwhile, place the cranberries in a small bowl and cover them with warm water. This will plump them up. Set them aside while the sprouts are in the oven.
6. Transfer the roasted Brussels sprouts and toasted pecans to a serving platter or bowl. Drain the cranberries and sprinkle them on top. Drizzle the balsamic vinegar over the dish, then sprinkle with parmesan cheese. Season with salt and pepper, to taste. Serve warm.

Heart Failure Care: A Q&A with Dr. Ahmet Afsin Oktay

We have well-established medications for the treatment of heart failure. Over the past five years, we have also had very exciting improvements in the field and our medication options have broadened. For instance, when we see patients with diabetes and heart failure, we work closely with our medicine and endocrinology colleagues to get our patients on some relatively new diabetes medications which control blood sugar and improve heart failure at the same time.

We have an excellent cardiac rehabilitation program at Wentworth-Douglass and our experienced physical therapists help our heart failure patients regain their strength to have a healthy lifestyle. Most of our heart failure patients enjoy participating in this comprehensive and very beneficial program.

Q: How does the Heart Failure Clinic at Wentworth-Douglass help patients?
AO: When you have heart failure, regular office visits with expert providers are very important. The Heart Failure Clinic supports this goal in helping our patients with education, symptom management and improving their overall comfort. The clinic’s team includes dedicated Heart Failure Nurse Navigator Hilary Niesuchowski, RN, who is available to answer questions and coordinate appointments. Pam Levesque, APRN, the nurse practitioner specialized in heart failure helps patients manage their symptoms, adjust medications, and collaborate with our expert cardiologists. I feel lucky to work along with an outstanding team. Our goal is to prevent the need for advanced medical and surgical therapies in our heart failure patients. But for patients who do need that level of care, through our collaboration with Massachusetts General Hospital, we have expert support from the Corrigan Minehan Heart Center’s Advanced Heart Failure Program. The Mass General team is only a phone call away and are a great resource, when it’s needed.

To learn more about the Heart Failure Clinic, call (603) 609-4417.

Jason’s Story - Cont. from Page 1

Miller’s case, this blockage was a “complete and total occlusion.” An occlusion occurs when a coronary artery is closed or blocked off—a major cause of almost all heart attacks. Over time, a coronary artery can narrow from the build-up of various substances, including cholesterol (atherosclerosis)—a condition called coronary artery disease. During a heart attack, one of these plaques can rupture and spill cholesterol and other substances into the bloodstream. A blood clot forms at the site of the rupture. If large enough, the clot can completely block the flow of blood through the coronary artery.

All heart attacks are serious, but STEMI is among the most dangerous—in which a major artery to the heart is completely blocked—and is often referred to as a widow-maker heart attack. Miller was transported to Wentworth-Douglass, and the STEMI Team was already in place when the ambulance arrived. He stayed on the stretcher (called a “hot stretcher”) and was brought immediately into the Cardiac Catheterization Lab.

He calls the rapid response and treatment he received “record breaking perfection.” It was just 23 minutes from his arrival at Wentworth-Douglass to the re-establishment of blood flow to his heart. According to Dr. Gregory A. Imbrie, Interventional Cardiologist, this speed is “the result of an amazing synergy between the EMS (Emergency Medical Services) team and the Hospital’s Cardiac Cath team. Because Wentworth-Douglass is full-service center, we have exceptional data on how rapid our response is, often called ‘door to device.’ In this case, it was 23 minutes. And what’s even more remarkable is that because of the thorough assessment the patient received from the Dover Fire and Rescue team—from the initial diagnosis, to the digital transmission to the hospital of the patient’s EKG results—we were able to immediately activate our STEMI team and stand ready to treat an acute heart attack.”

Miller’s blockage was cleared with a procedure called aspiration thrombectomy, along with the placement of a drug-eluting stent (a small mesh-like tube). According to Dr. Imbrie, ‘The patient received an advanced stent that is coated with a drug to help prevent re-blockage. Think of the artery as a cave that has given way and needs its sides reinforced, after we’ve cleared out all of the rocks and debris that were clogging it up in the first place.’ The procedure was done using the team’s trans-radial approach that provides radial artery access through the wrist and forearm.

Says Miller: “I was awake the whole time. The nurses were fantastic, keeping me alert and focused, while reassuring me that everything was going well. From the back of my knees up to my earlobes, I had felt severe cramming, such intense pain. As soon as the blockage was cleared, Dr. Imbrie said to me, ‘You should start feeling some relief now.’ Before he could even finish that sentence, I felt like someone had turned off the faucet, and the pain was just gone.”

According to Dr. Imbrie, the adage that “time is heart muscle” applies perfectly to Miller’s outcome: “He has no scarring, and he has completely preserved heart function. I remember his wife saying to me, ‘How could you be done? I just got off the phone with him.’ The time from Miller’s first medical contact when EMS arrived at his car to the placement of the stent and restoration of blood flow at Wentworth-Douglass was 42 minutes. And I have every reason to believe that our response times will only continue to improve.”

Says Miller: “It was truly a team effort, and I feel so grateful to the entire medical team and to my wife and family. The Cardiac Cath nurses came to visit me the next day, which was really touching. I feel amazing. My stamina is back and I can put in my usual 50-plus hours a week in carpentry work. I am one lucky guy.”

EXPERT CARDIAC CARE

We provide general cardiology services as well as device clinics and testing at two Wentworth Health Partners physician practices:

THE CARDIOVASCULAR GROUP
19 Rollinsford Road, Dover
(603) 516-4265

CARDIOLOGY AT PEASE
Portsmouth Outpatient Center
73 Corporate Drive (Building B)*, Portsmouth
(603) 610-8070

*This practice will be moving to Building A (67 Corporate Drive) in late January.
If something happened to you and you were unable to make healthcare or financial decisions for yourself, would your loved ones know your wishes? Establishing advance directives like a Durable Power of Attorney for Healthcare (DPOA-HC), a Living Will, or a Durable Power of Attorney for Finances, will help alleviate the burden for your loved ones if they need to make personal decisions for your care during a stressful and emotional time.

Advance directives are instructions you give regarding your future care. Family, friends and medical providers attempt to understand and fulfill your instructions, no matter what form they are in. However, to ensure that everyone understands your instructions, the State of New Hampshire recognizes a written advance directive as a legal document with two parts: a Durable Power of Attorney for Health Care and a Living Will.

A Durable Power of Attorney identifies your health care agent (often called "proxy"). This is the person that you trust to act on your behalf if you are unable to make health care decisions or communicate your wishes.

A Living Will gives your medical team guidance on the type of care you want at the very end of your life.

A Durable Power of Attorney (financial) is a legal document that authorizes another person to make financial and legal decisions on your behalf. This is not a part of your health care record.

But where to start...

TALKING MATTERS

“Just sitting down and having a conversation with a family member or loved one is a great place to start,” says AnneMarie Lamson, RN, BSN, ACM-RN, CHGCN, Director of Care Coordination at Wentworth-Douglass.

“Sharing what matters most to you about your end of life care will be a big help. Each conversation you have helps to provide a shared understanding of your hopes and wishes. This helps your health care proxy when the time comes to make decisions,” Lamson adds.

The Institute for Health improvement created The Conversation Project to help individuals and families through what can be a difficult conversation. Conversations about the end of life can be daunting but tools from The Conversation Project can guide people through the process to make sure their own wishes, and their loved ones wishes, are shared and respected. Learn more at www.TheConversationProject.org.

HOW WE CAN HELP

Social Workers at Wentworth-Douglass Hospital are available at no cost to help you navigate the advance directives process and answer questions. Advance directives appointments are available Monday through Friday, between 8:30 a.m. and 4 p.m.

To make an appointment with the Social Work Department, call (603) 740-2826 or email SocialWorkServices@wdhospital.org.

**Managing Your Health Care Information Just Got Easier**

Introducing Partners Patient Gateway, a convenient and secure way to manage your health care information and connect with your providers online – at Wentworth-Douglass Hospital and across the Partners HealthCare system.

The Partners Patient Gateway website and mobile app provide a fast, convenient, free way to:
- View test results
- Manage your appointments
- Send a message to your provider
- Review visit summaries
- Renew your prescriptions

**There Are Two Ways to Enroll:**
1. Visit patientgateway.org and select the “Enroll Now” button. You do not need an activation code to complete the enrollment process. Just select “Enroll Now” again at the bottom of the page.
2. Your provider’s office can give you an activation code and help you complete your enrollment in the office.

**ENROLL NOW!**
