Diagnosis: Multiple Sclerosis

The following orders will automatically be enacted unless a specific order is written to the contrary:

NOTE: ● Patient should plan to stay for a minimum of 8 hours.
 ● Review Gilenya Patient Medication Guide (Form #: 6011−274) prior to administration of first dose.
 ● Informed Consent obtained
 ● Baseline ECG within 6 months prior to administration of first dose – obtain copy.
 ● Baseline vital signs including apical pulse
 ● Administer Gilenya 0.5 mg PO X 1 tablet. Patient will take own medication. Send to pharmacy for identification prior to administration.
 ● Obtain vital signs including apical pulse every hour X 6 hours after Gilenya is administered.
   → Notify provider and call a Code Rush for a sustained heart rate below 45 beats per minute
   → Notify provider and continue hourly monitoring if lowest heart rate occurs on the 6th hour of monitoring.
   → Notify provider if patient develops symptomatic bradycardia. Overnight admission with continuous ECG monitoring is indicated until symptoms resolve. First−dose monitoring procedures should be repeated for the second dose (next day).
 ● Obtain ECG in all patients 6 hours after administration of Gilenya.
   ● ECG must be read by Cardiologist to look for the following risk points (potential adverse drug effects) and patient verbally cleared for discharge by Cardiologist.
     → Bradycardia after administration of 1st dose of Gilenya
     → QT interval prolongation after 1st dose of Gilenya
     → New onset second degree or higher AV block after 1st dose of Gilenya
